

Front End Developer | Global Protection Corp.

About Us:

Global Protection Corp. is one of the industry's largest and fastest-growing FDA-certified manufacturers and distributors of sexual health products to the consumer, public health, and retail markets. We're passionate about making condoms as socially acceptable as toothpaste — and using technology and innovation to drive better user experiences.

Global Protection (globalprotection.com) manufactures a wide range of sexual health brands and products, including ONE® Condoms (onecondoms.com), myONE® Condoms (myonecondoms.com), and Custom Condoms® (customcondoms.com).

Position:

Global Protections seeks a part-time front-end developer with experience and skill in the following tools: Tailwind, Laravel, Laravel Dusk, Selenium, Livewire, Figma, and Liquid. This short-term project will last a few weeks. The right candidate will deliver results in a remote environment and works well as part of a distributed agile team. You will attend standups online, transfer existing wireframes to Figma models in conjunction with our creative team, and then translate these designs onto our Laravel platform with our backend team. For the right person who delivers timely and efficient results, we expect there will be future projects. Please be prepared to share project and portfolio pieces and be able to discuss your workflow as well as your experience with browser testing.

What You'll Bring:

2+ years of experience with PHP development under the Laravel framework.

1+ years of experience with the Tailwind CSS & UI framework.

1+ years of experience with browser testing using the Selenium toolset. We are focused on Laravel Dusk, but for the right developer, experience with Selenium should be sufficient to get started.

Experience working with remote teams.

A self-starter who possesses the confidence & wherewithal to initiate and maintain regular communication with the team. You must have excellent communication skills.

The ability to write technical documentation. Documentation is essential to this project, and we will ask to see examples of your previous work.

Experience with git repositories and GitHub issues.

Familiarity with e-commerce paradigms.

Experience identifying and managing project work structure, tasks, deliverables, milestones, and dependencies.

Availability for regular check-ins with the team. Our team is spread out geographically, so managing a mutual time for stand-ups is a requirement.

To apply:

Please send your resume and cover letter to mimpola@globalprotection.com. In the subject line, please include "Application: Front End Developer – [your first and last name]".
